

HERCULES high pressure - high cycle stainless steel ball valve

Macro Ball valves

Category HERCULES

Subcategory HERCULES high pressure - high cycle

benefits

1. Seat in "EXTREME"**

Less wear comparing with not modify seat.
High resistance to stress.

2. Stainless steel ball, coated with 40µm Hard Chrome

Longer seal life due to the low wear of the ball.

3. "POWERAMMIDE"** stem bush

It grants a perfect alignment of the shaft on the body and prevents oscillations with high pressure.
No seizing.
High number of cycles.

4. Elastomer O-Ring with a hardness of 90 Shore A

No deterioration with quick operations.

4. Low-permeability O-ring "Rapid Gas Decompression"

Good resistance to explosive decompression.

5. Stem in 17-4 PH H900

Increased mechanical strenght about 5 times more compared to a standard 316 S.S.

5. Shaft rolling

Less wear of the seals due to the low roughness (0,4 micron Ra) which facilitate the sliding of the shaft

6. Antistatic device (electrical continuity between ball, stem and body)

Static electricity is avoided which can cause sparks and fire in an inflammable/explosive environment.
Contact safety throughout the entire life of the valve.

PED Certificate

Full compliance with European safety standards for pressure equipment (for DN ≥ 32).

Fire safe design

Guarantees the tightness of the valve also in case of fire.

Atex Certificate

Installation is possible in a potential explosive environment

UP to SIL 3 certified

Guarantee of the high level of functional safety

*Blend of polymers and aramid filler

**Aromatic polyamide long chemical structure
