## GENERAL INFO

### RACKON - Double acting DA

benefits

**RACK & PINION KINEMATICS**

**DOUBLE ADJUSTMENT**

**DA DOUBLE ACTING**

**SR SPRING RETURN**

**1. Energized and self-lubricated strips.**

Less friction between piston and cylinder.

It prevents the bonding of the seal to the cylinder even after long periods of inactivity.

**2. Adjustment cam made by steel.**

Possibility to adjust the closing and/or opening with a standard actuator ( $\pm 5^\circ$  for each adjustment).

Simplicity and reliability of adjustment.

**3. Transformation of linear motion into rotary motion using Rack and Pinion kinematics.**

Linear torque (BTO & BTC), suitable for ball valves.

High adjustment precision thanks to the rigidity of the rack and pinion system and the mechanical stop between cam and adjustment grub screw.

Uniform rotation speed.

**4. Rolled cylinder.**

Less wear of the energized ties thanks to the low roughness of the surface (0.15  $\mu\text{m Ra}$ ).

**5. Cartridge spring modular system.**

High configuration flexibility and precision of the torque generated by the springs.

High range of configurations.

**NAMUR interface for solenoid valves can be available on complete range.**

With plate reported from RK10 to RK240. - Integrated for RK 300 and RK480.

**NPT air hole threads available on request.**

With plate reported for all sizes.

**100% in- house manufacturing process technology.**

Maximum control and accuracy in all the stages of the manufacturing process.

**ATEX compliance.**

Installation is allowed in a potential explosive environment.

**Up to SIL 3 Certified.**

Guarantee of the high level of functional safety.

## features

### TECHNICAL FEATURES

- Torque from 10 Nm to 474 Nm.
- Mounting flange according to EN ISO 5211: F03 - F04 - F05 - F07 - F10 - F12.
- In accordance with EN 15714-3.
- In conformity with directive ATEX 2014/34/EU.
- Rotation angle: 100° (-5°, +95°).
- Double adjusting +5° and -5° for each end position (0° and 90°).
- Torque: directly proportional to the air supply (see table).
- The code numbers after the RK letters, always correspond to the torque in Nm by 5,6 bar air supply.

### WORKING CONDITIONS

- Standard temperature range: -20°C +80°C.  
Special versions:
  - high temperature: -20°C +150°C.
  - low temperature: -50°C +60°C.
- Nominal pressure: 5.5 bar; maximum operating pressure 8 bar.
- Operating medium: filtered compressed air, no lubrication needed according to UNI EN 15714-3:2009.
- In case of lubrication, use non-detergent oil, compatible with the internal seals.

### SPECIAL VERSION ON REQUEST, CODING KEY

CHARACTERISTIC		
Actuator Type	RK	
Size	0010, 0020, 0040, 0060, 0080, 00120, 00160, 0240, 0300, 0480	
Customer	VO	OMAL
Rotation Angle [°]	A	90°
	B*	180°
	C*	120°
	D*	135°
Rotation direction	R	Clockwise rotation
	L	Counter-clockwise rotation
Functioning configuration	S	Spring Return N.C.
	O	Spring Return N.O.
	D	Double Acting
Springs	00	No springs
	20	Springs 2,0 bar
	25	Springs 2,5 bar
	30	Springs 3,0 bar
	35	Springs 3,5 bar
	40	Springs 4,0 bar
	45	Springs 4,5 bar
	50	Springs 5,0 bar
Flange or smaller flange in case of double flange available	55	Springs 5,5 bar
	60	Springs 6,0 bar

For output torque at different pressures contact OMAL.

## specifications

### DOUBLE ACTING ACTUATOR WORKING PLANE

#### WORKING PLANE

Supplying air through the air connection 4, the pistons move towards the center and shaft rotate in a clockwise direction. The above drawing shows the final position.

#### WORKING PLANE

Supplying air through the air connection 2, the pistons move outwards the center and shaft rotate in a counter-clockwise direction. The above drawing shows the final position.

### INSTRUCTIONS FOR ADJUSTING THE STROKE OF THE DOUBLE ACTING ACTUATOR

### OPENING ADJUSTMENT

### CLOSING ADJUSTMENT

- A) Check that there is no pressurized air in the actuator (in both chambers).  
 B) Loosen locknut A1.  
 C) Supply air to hole "2" (sufficient only for movement) the pistons will be in the end of stroke.  
 D) Screw or unscrew the screw A with an Allen key for the desired adjustment (maximum adjustment range  $\pm 5^\circ$ ).  
 E) Once the adjustment has been made, with an Allen key stop the screw A, at the same time with a wrench tighten the locknut A1.

N.B. If necessary, repeat the operations until the desired setting is obtained.

- A) Check that there is no pressurized air in the actuator (in both chambers).  
 B) Loosen locknut B1.  
 C) Supply air to hole "4" (sufficient only for movement) the pistons will be in the end of stroke.  
 D) Screw or unscrew the screw B with an Allen key for the desired adjustment (maximum adjustment range  $\pm 5^\circ$ ).  
 E) Once the adjustment has been made, with an Allen key stop the screw B, at the same time with a wrench tighten the locknut B1.

N.B. If necessary, repeat the operations until the desired setting is obtained.
